ABOUT ME

Empowering growth through strategic IT project management and innovative development.

As a Project Manager:

- My expertise lies in managing complex IT projects according to ISO 13845 (medical devices) and ISO 27001 (information security) standards, from project planning and scoping to risk management and stakeholder communication.
- Excel in building strong relationships with clients, vendors, and team members to ensure seamless project execution and delivery.
- With a passion for innovation and continuous improvement, I always strive to identify opportunities to enhance project delivery processes and methodologies.

As a Developer:

- Experienced in designing and implementing complex software systems, utilizing agile methodologies and version control tools to ensure code quality and project efficiency.
- Thriving in collaborative environments, where I can work closely with other developers and stakeholders to solve complex problems and create elegant solutions.
- I am always eager to learn new technologies and keep up with industry trends to continuously improve my skills and stay on the cutting edge of development.

I am well versed in:

- developing custom React components and using standard ones
- developing modern and responsive user interfaces
- developing efficient backend logic using Django
- developing full-stack solutions (React/Django)
- MySQL and MongoDB management via Django and Node.js
- computer vision and eye recognition with Python and OpenCV
- writing clean, readable and well-documented code
